**RE: SENIOR DATA ENGINEER**

Dear Madison,

For over 13 years I've worked on the systems that hold student data at BC universities. When your posting said Minga holds student-level data and treats it that way, I recognized my own job. Building a platform that schools rely on every day, with their students' data treated as carefully as I've always treated it, is work I'm excited to be part of.

At Vancouver Island University I:

- maintain the data warehouse pipeline behind the university's statutory reporting to the province, and automated much of the DBA work behind each submission;
- designed and built VIU's integration with StudentAid BC's SIMS platform, which confirms enrolment and releases student funding;
- lead the modernization of about 90 legacy Classic ASP applications to .NET, working with the departments that depend on them;
- designed our DevOps workflow and authored the team's onboarding and reference handbook; and
- use AI tooling daily, but never to do the work for me: I oversee every task it performs with careful scrutiny, using custom tooling I built to keep it accountable, and nothing reaches production until I've reviewed, tested, and taken ownership of it.

I was programming long before these tools existed, which means I can tell quickly whether AI-written code is doing its job properly, and correct it when it isn't.

Owning a pipeline end to end, being the person a team can count on, and protecting sensitive student data have been the core of my career. Everything I build ships with documentation and training from a system I designed for exactly that, so the next person can pick it up without me, and I'd rather teach someone to answer their own data question than answer it for them twice.

I always encourage and welcome criticism and feedback on my work. Pushback and critical questions are essential to reaching the team's goals; I never take them personally, and I use them to improve.

My foundation in SQL and data modelling, built on Oracle and PostgreSQL, translates to any platform, Snowflake included.

I live in Kelowna, and I look forward to discussing in person how I can help fill this role.

Sincerely,

**William Tucker**
